

What is OBESITY?

When you carry too much fat on your body, placing your health at risk.

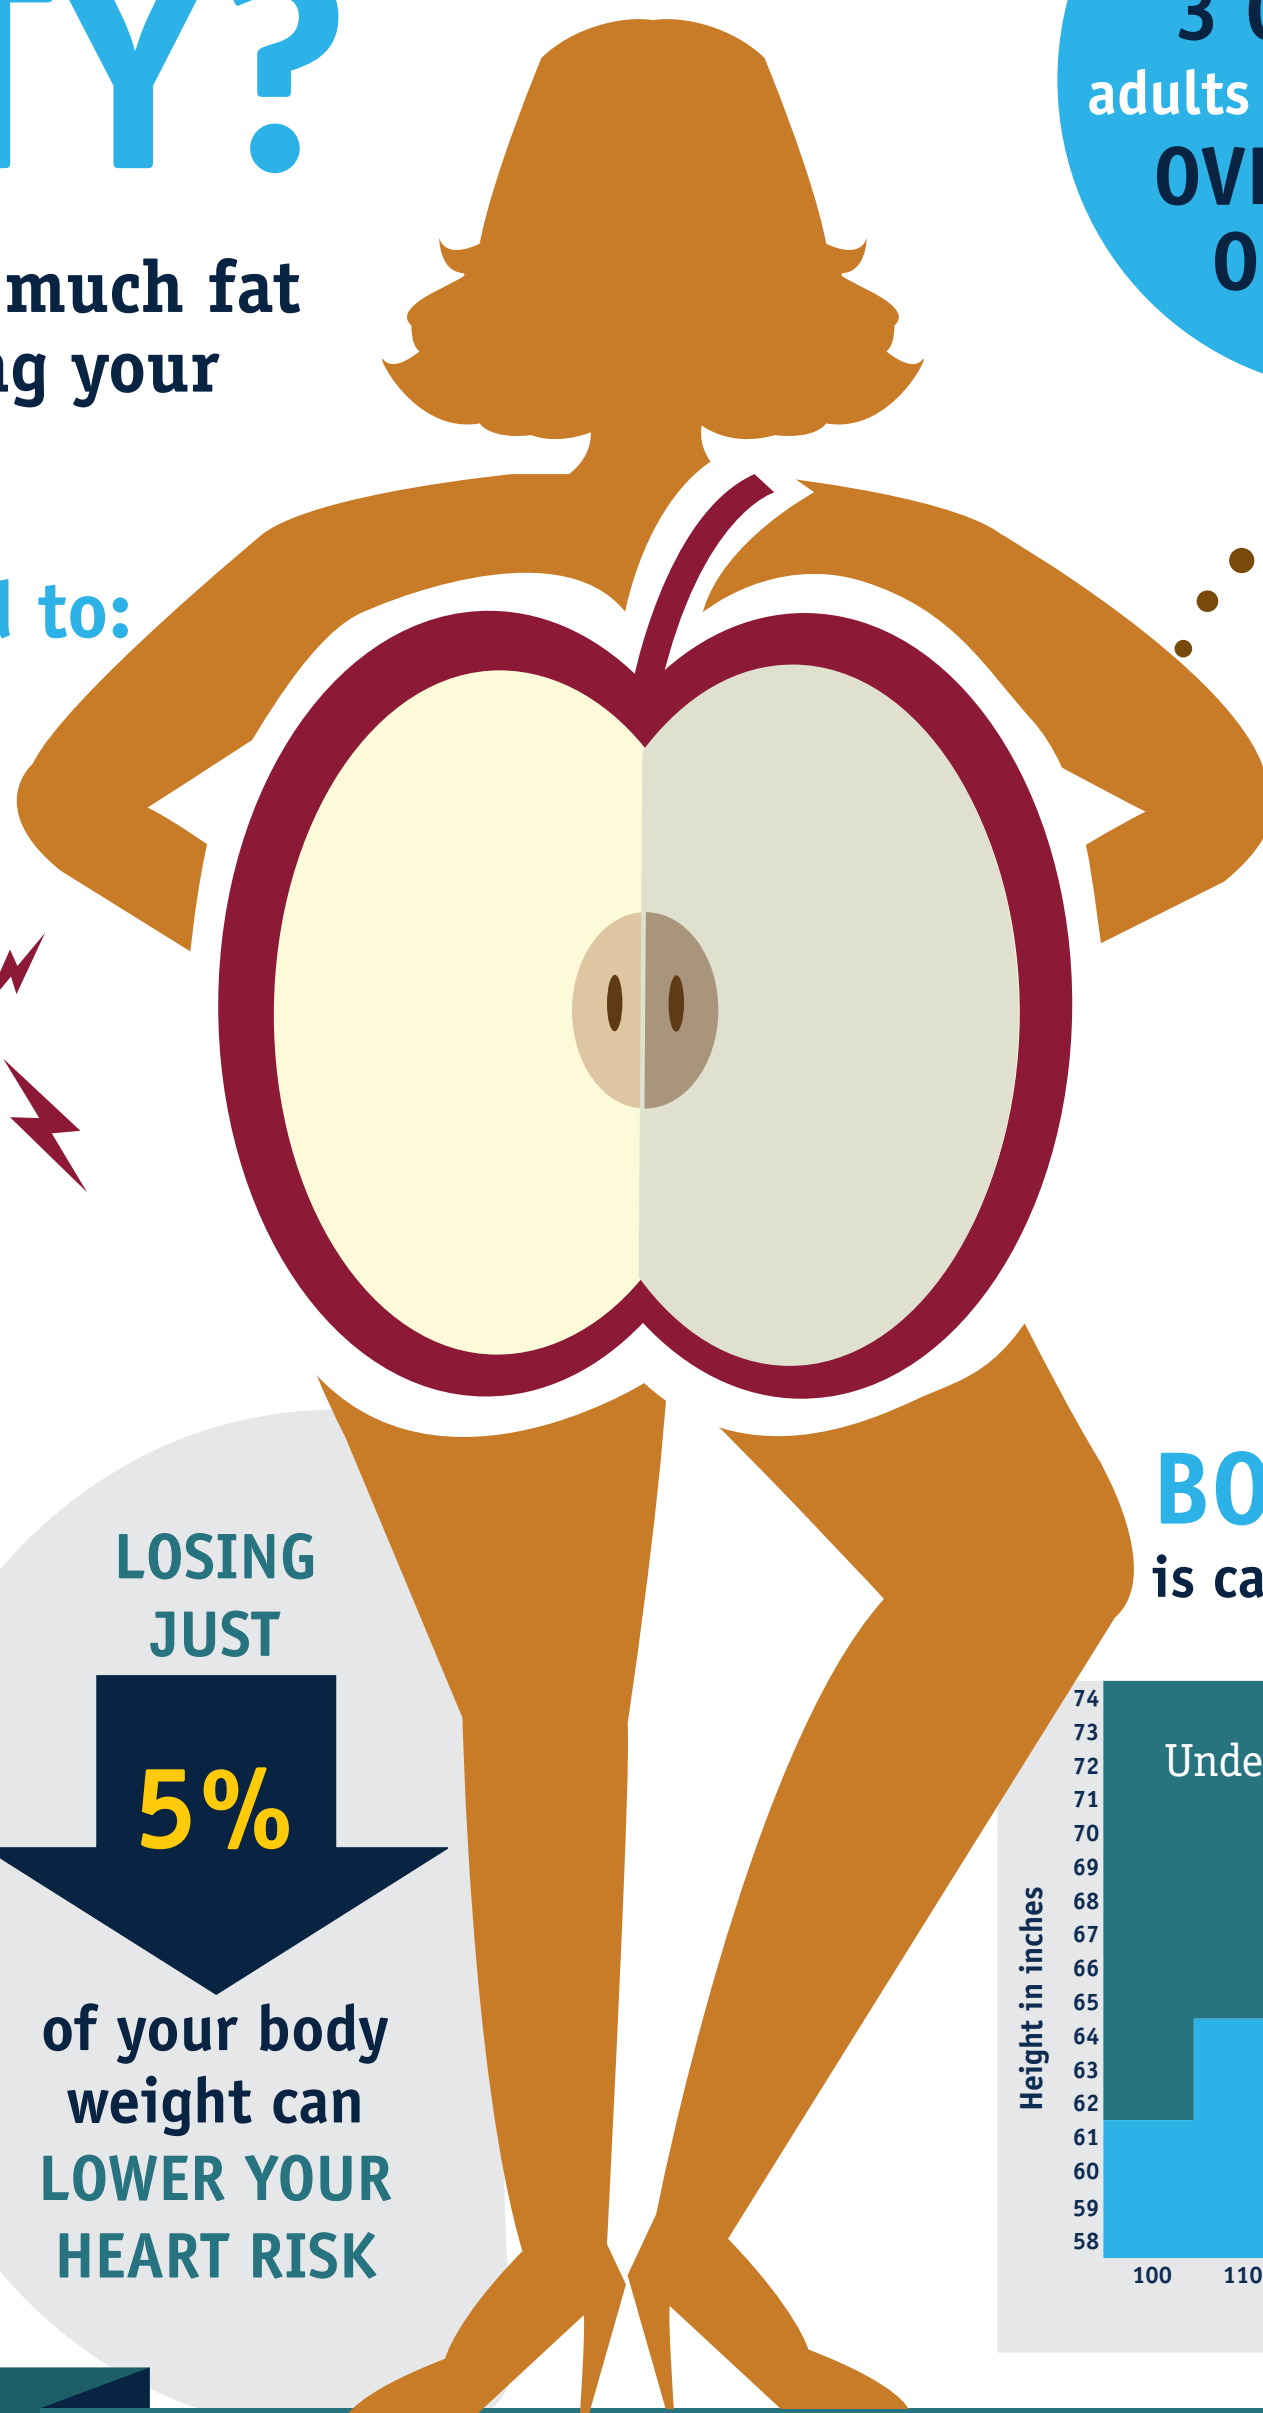

Obesity has been linked to:

- Heart disease
- High blood pressure
- High cholesterol
- Diabetes
- Heart failure
- Heart attack
- Stroke

NEARLY
3 OUT OF 4
adults in the U.S. are
OVERWEIGHT
OR OBESE

Too much fat around your middle (BEING "APPLE SHAPED") puts you at HIGHER RISK FOR HEART DISEASE – even if you have normal BMI

WAIST SIZE can signal trouble

35+ inches in general for women

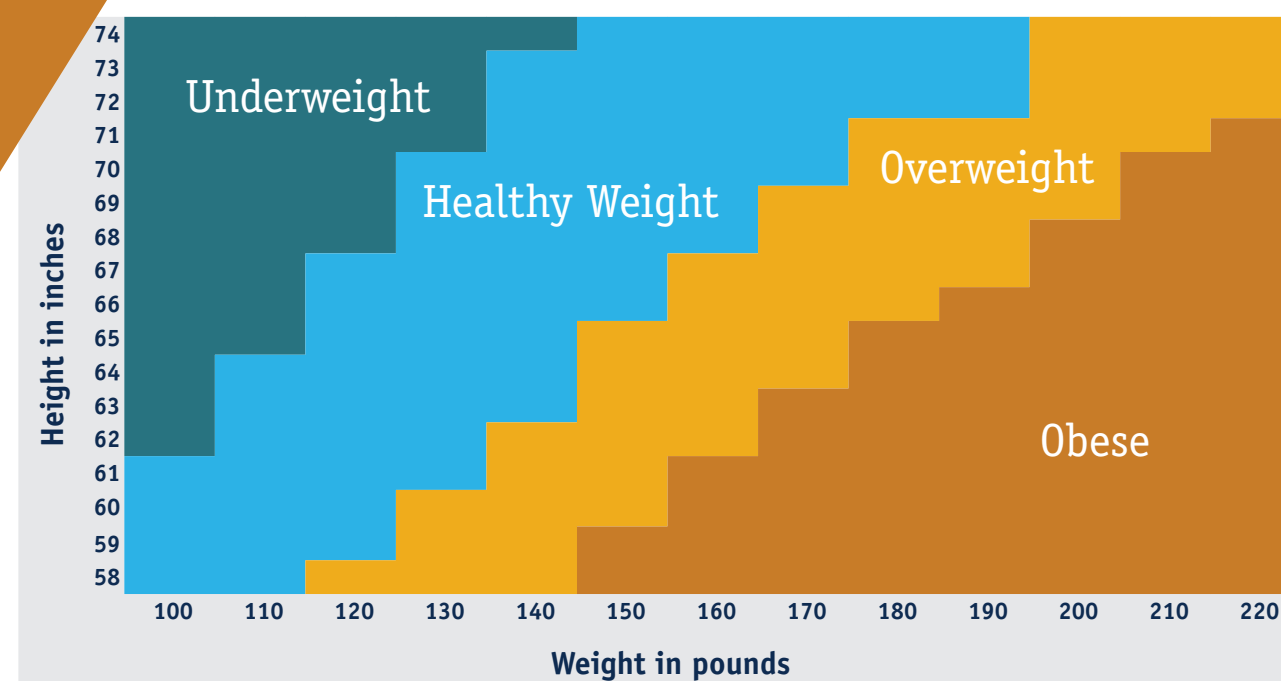

40+ inches in general for men

LOSING JUST
5%
of your body weight can LOWER YOUR HEART RISK

BODY MASS INDEX (BMI) is calculated using your weight and height

What YOU Can Do

Exercise more

Eat fewer calories

Get enough sleep

Limit alcohol
